### Profile

I am currently an IT Director, Trainer and USMC veteran with 20 years experience working professionally in technology. I'm also now a full stack developer and graduate of the UCF coding bootcamp. In this 24 week course I developed with HTML, CSS, Javascript, jQuery, Node, and more.

I have a passion for technology integration and am a tireless learner of all things tech. I have seen the transformative role technology plays in people's lives and am excited to leverage new solutions and use them to improve things we do.

I have experience building networks, servers and systems. In my career and personal life I have learned and mastered many complex technical systems and always look forward to the challenge of something new. Currently I am the IT director of a private school. One of my many accomplishments there was starting the schools first Makerspace and starting a coding programming for elementary and middle school students.

I hope to utilize my interpersonal skills and technological can-do attitude as I join a web development team and build upon the skills I learned in the UCF full stack development program.

### Experience
